

Here are 3 drafts based on your campaign so far. Click Next if you like the personality, or tell me below what to change.

To: David Gronback

David, quick question?

hey David,

As Project Compliance Officer at Copenhagen Fintech, you're probably the one balancing speed with the stuff that has to be documented cleanly. We're building FraudWatch AI for the VibeForward Track 02 Fraud Watch hackathon, and it's set up with four agents, real handoffs, Cognee as shared memory, and visible decision notes at every step.

Worth a 15 minute look to see if that setup is useful for your world?

Paul, quick question?

hey Paul,

As Risk and Compliance Officer at Ambledown Financial Services, you're likely dealing with a lot of decisions that need to be clear, traceable, and easy to explain later. FraudWatch AI has four agents, real handoffs, Cognee as shared memory, and a visible explanation for every decision.

Is that something you'd want to see in a short demo this week?

Anna, 4 agent demo?

hey Anna,

As Chief Compliance Officer and Head of Risk at Walter Scott, you're probably focused on how decisions get reviewed, not just whether they get made. We built FraudWatch AI hits the big requirements, four agents, real handoffs, Cognee as shared memory, and visible explanations on every call.

Open to a 15 minute demo, or is that a pass for now?
